The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12 and 15-18 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Chang 6,441,403.

Chang discloses in figures 5A and 5B a GaN based light emitting diode wherein light is extracted through a nitrogen face of the LED and a surface of the N-type GaN layer 300 has a roughened cone-shaped face. Claims 1-8 are rejected because the final structure is anticipated regardless of the process used to make the device. A product by process claim is directed to the product per se, no matter how actually made, In re Hirao, 190 USPQ 15 at 17 (footnote 3). See also In re Brown, 173 USPQ 685; In re Luck 177 USPQ 523; In re Fessman 180 USPQ 324; In re Avery 186 USPQ 161; In re Wertheim 191 USPQ 90; and In re Marosi et al 218 USPQ 289, all of which make it

clear that it is the patentability of the final product per se which must be determined in a "product by process" claim, and not the patentability of the process, and that an old product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or not. Note that applicant has the burden of proof in such cases, as the above caselaw makes clear.

Claim 9 is rejected because c-plane wafers are ordinary in the art and would have been obvious to practice in Chang, there being no unexpected results over Chang.

Claims 10-12 are rejected because Chang shows electrodes and the same material, and the electrodes of Chang are also highly reflective because they are metals.

Claims 15 and 16 are rejected because the formation of the cones in Chang result in an angle of similar magnitude.

Claim 17 is rejected because the formation of the Chang device results in a GaN device with a surface roughened N-face.

Claim 18 is likewise rejected as the final product does not structurally distinguish over Chang. See the above recited product by process caselaw.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang in view of Nisitani 6,229,834 or Itaya 5,780,873.

Itaya suggests a current block or current confining frame as layer 216 to improve the device function of a Chang type device. Likewise Nisitani shows current block layers as 51 to be routine structure in these type led devices to improve current handling.

Claims 13 and 14 are obvious structure.

Application/Control Number: 10/581,940 Page 4
